SLIMLINE SOLAR POWERED CHARGER WITH INTEGRATED BATTERY SOLARMONKEY ADVENTURER

**“I WOULD VIEW THE CHARGER
AS AN ESSENTIAL COMPONENT
OF ANY FUTURE EXPEDITION”**

The solarmonkey adventurer is the first Powertraveller solar charger to feature an internal battery which, in optimum light conditions, can be charged by the solar panels in just 8 to 12 hours. When adventurers finally stop after a day's exploring the solarmonkey adventurer can carry on charging itself and other devices efficiently in low light conditions thanks to the maximum power point tracker (MPPT) technology within it and, when the sun finally sets, the internal battery can also keep your devices powered through the night.

All Powertraveller products undergo extensive testing and the solarmonkey adventurer is no exception. Feedback from the company's most extreme brand ambassadors was really positive and they loved the bespoke travel case. This has been developed using toughened materials and includes integral fixings, straps and a carabiner so that the solarmonkey adventurer is well protected and can be firmly secured to a backpack to make the most of the day's sunlight to recharge the internal battery unit while on the go. There are also pockets within the case to hold your cables and tips.

One of the features of the solarmonkey adventurer is that it can simultaneously charge the unit and recharge a device via the USB port. The bespoke travel case allows easy access to the USB port – perfect for saving time when you need to check if you have missed that important telephone call or check your coordinates on the GPS.

Before embarking on your next adventure, you can pre-charge the internal battery using the International Mains Charger, available separately from Powertraveller.com
